GRUNDFOS

GB: EC declaration of conformity

We, Grundfos, declare under our sole responsibility that the products CR, CRI and CRN, to which this declaration relates, are in conformity with these Council directives on the approximation of the laws of the EC member states:

— Machinery Directive (2006/42/EC).
Standard used: EN 809:1998, A1:2009.
— EMC Directive (2004/108/EC).
— Ecodesign Directive (2009/125/EC).
Electric motors:
Commission Regulation No 640/2009.
Applies only to three-phase Grundfos motors marked IE2 or IE3.
See motor nameplate.
Standard used: EN 60034-30:2009.
— Ecodesign Directive (2009/125/EC).
Water pumps:
Commission Regulation No 547/2012.
Applies only to water pumps marked with the minimum efficiency index MEI. See pump nameplate.

This EC declaration of conformity is only valid when published as part of the Grundfos installation and operating instructions (publication number 97688538 1112).

CN: EC 产品合格声明书

我们格兰富在我们的全权责任下声明，产品 CR, CRI 和 CRN，即该合格证所指之产品，符合欧共体使其成员国法律趋于一致的以下欧共理事会指令：

— 机械设备指令 (2006/42/EC)。
所用标准：EN 809:1998, A1:2009。
— 电磁兼容性指令 (2004/108/EC)。
— 生态化设计指令 (2009/125/EC)。
电动机：
欧委会规定第 640/2009 号。
只适用于带有 IE2 或 IE3 标志的格兰富三相电机。参见电机铭牌。
所用标准：EN 60034-30:2009。
— 生态化设计指令 (2009/125/EC)。
水泵：
欧委会规定第 547/2012 号。
仅适用于标有最低效率指标 （MEI）的水泵。见泵铭牌。

本EC合格性声明仅在作为格兰富安装与操作指导手册 （出版号97688538 1112）的一部分时有效。

Original installation and operating instructions.

CONTENTS

Warning

Prior to installation, read these installation and operating instructions. Installation and operation must comply with local regulations and accepted codes of good practice.

1. Symbols used in this document

Warning

If these safety instructions are not observed, it may result in personal injury.

Warning

If these instructions are not observed, it may lead to electric shock with consequent risk of serious personal injury or death.

Caution ***If these safety instructions are not observed, it may result in malfunction or damage to the equipment.***

Note ***Notes or instructions that make the job easier and ensure safe operation.***

2. Handling

When lifting the entire pump with motor, follow these instructions:

- Pump with motor sizes 0.37 - 7.5 kW:
  Lift the pump in the motor flange by means of straps or the like.
- Pump with motor sizes 11-75 kW:
  Lift the pump by means of the motor eyebolts.

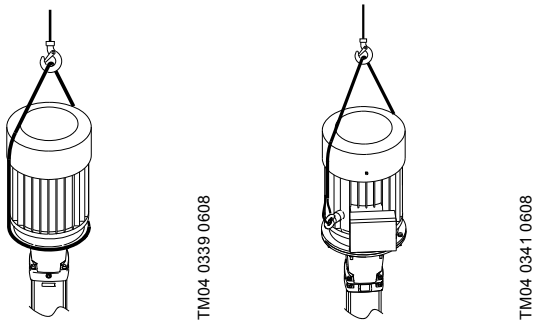

Fig. 1 Correct lifting of a CR pump

In the case of CR, CRI and CRN pumps with other motor makes than those mentioned above, we recommend that you lift the pump by means of straps in the motor flange.

3. Type designation

3.1 Type key for CR, CRI, CRN 1s, 1, 3, 5, 10, 15 and 20

Example	CR	3-	10	X-	X-	X-	X-	XXXX
Type range: CR, CRI, CRN								
Nominal flow rate in m^3/h								
Number of impellers								
Code for pump version								
Code for pipework connection								
Code for materials								
Code for rubber pump parts								
Code for shaft seal								

3.2 Type key for CR, CRN 32, 45, 64, 90, 120 and 150

Example	CR	32-	2	1-	X-	X-	X-	X-	XXXX
Pump range: CR, CRN									
Nominal flow rate in m^3/h									
Number of stages									
Number of impellers with reduced diameter									
Code for pump version									
Code for pipework connection									
Code for materials									
Code for rubber pump parts									
Code for shaft seal									

4. Applications

Grundfos multistage in-line centrifugal pumps, types CR, CRI and CRN, are designed for a wide range of applications.

CR, CRI, CRN

CR, CRI CRN pumps are suitable for liquid transfer, circulation and pressure boosting of cold or hot clean liquids.

CRN

Use CRN pumps in systems where all parts in contact with the liquid are made of high-grade stainless steel.

Pumped liquids

Thin, clean, non-flammable liquids, not containing solid particles or fibres. The liquid must not attack the pump materials chemically.

When pumping liquids with a density and/or viscosity higher than that of water, use motors with correspondingly higher outputs, if required.

5. Technical data

5.1 Ambient temperature and altitude

Motor power [kW]	Motor make	Motor efficiency class	Maximum ambient temperature [°C]	Maximum altitude above sea level [m]
0.37 - 0.55	Grundfos MG	-	+40	1000
0.75 - 22	Grundfos MG	IE3	+60	3500
30 - 75	Siemens	IE3	+55	2750

If the ambient temperature exceeds the above temperature values or the pump is installed at an altitude exceeding the above altitude values, the motor must not be fully loaded due to the risk of overheating. Overheating may result from excessive ambient temperatures or the low density and consequently low cooling effect of the air.

In such cases, it may be necessary to use a motor with a higher rated output.

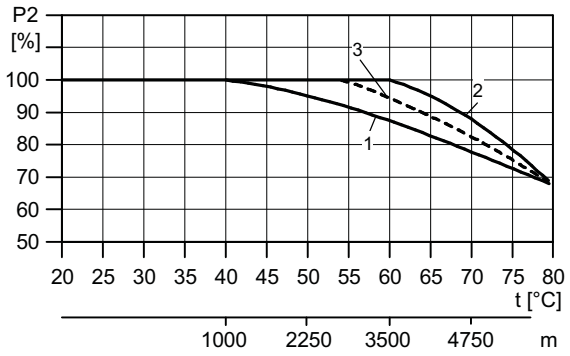

Fig. 2 Motor output depends on temperature/altitude

Pos.	Motor power [kW]	Motor make
1	0.37 - 0.55	MG
	0.37 - 22	MGE
2	0.75 - 22	MG
3	30 - 75	Siemens

Example

Figure 2 shows that the load of an IE3 motor at an ambient temperature of 70 °C must not be loaded more than 89 % of the rated output. If the pump is installed 4750 metres above sea level, the motor must not be loaded more than 89 % of the rated output.

In cases where both the maximum temperature and the maximum altitude are exceeded, the derating factors must be multiplied (0.89 x 0.89 = 0.79).

Note

For motor bearing maintenance at ambient temperatures above 40 °C, see section 9. Maintenance.

5.2 Liquid temperature

The table on page 15 states the relationship between liquid temperature range and maximum permissible operating pressure.

Note

The maximum permissible operating pressure and liquid temperature ranges apply to the pump only.

5.3 Maximum permissible operating pressure and liquid temperature for the shaft seal

Note

The diagram below applies to clean water and water containing anti-freeze liquids.

CR, CRI, CRN 1s to 20 and CR, CRN 32 to 150

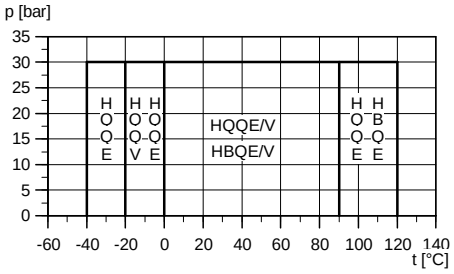

Fig. 3 Maximum permissible operating pressure and liquid temperature

Standard shaft seal	Motor [kW]	Max. temperature range [°C]
HQQE	0.37 - 45	-40 °C to +120 °C
HBQE	55 - 75	0 °C to +120 °C
HQQV	0.37 - 45	-20 °C to +90 °C
HBQV	55 - 75	0 °C to +90 °C

CRI and CRN pumps using a type H shaft seal with EPDM rubber parts, HxxE, can be cleaned in place (CIP) with liquids up to 150 °C for maximum 15 minutes.

Note

The pumping of liquids above +120 °C may result in periodical noise and reduced pump life.

CR, CRI, CRN pumps are not suitable for the pumping of liquids above 120 °C for long periods.

5.4 Minimum inlet pressure

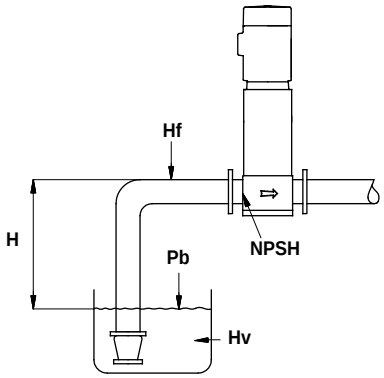

Fig. 4 Schematic view of open system with a CR pump

The maximum suction lift "H" in metres head can be calculated as follows:

$H = p_b \times 10.2 - NPSH - H_f - H_v - H_s$

p_b = Barometric pressure in bar.
(Barometric pressure can be set to 1 bar.)
In closed systems, p_b indicates the system pressure in bar.

NPSH = Net Positive Suction Head in metres head (to be read from the NPSH curve on page 13 at the highest flow the pump will be delivering).

H_f = Friction loss in suction pipe in metres head at the highest flow the pump will be delivering.

H_v = Vapour pressure in metres head, see fig. E on page 18.
t_m = liquid temperature.

H_s = Safety margin = minimum 0.5 metres head.

If the calculated "H" is positive, the pump can operate at a suction lift of maximum "H" metres head.

If the calculated "H" is negative, an inlet pressure of minimum "H" metres head is required. There must be a pressure equal to the calculated "H" during operation.

Example

p_b = 1 bar.
Pump type: CR 15, 50 Hz.
Flow rate: 15 m^3/h.
NPSH (from page 13): 1.1 metres head.
H_f = 3.0 metres head.
Liquid temperature: +60 °C.
H_v (from fig. E, page 18): 2.1 metres head.

$H = p_b \times 10.2 - NPSH - H_f - H_v - H_s$ [metres head].

$H = 1 \times 10.2 - 1.1 - 3.0 - 2.1 - 0.5 =$ 3.5 metres head.

This means that the pump can operate at a suction lift of maximum 3.5 metres head.

Pressure calculated in bar: 3.5 x 0.0981 = 0.343 bar.
Pressure calculated in kPa: 3.5 x 9.81 = 34.3 kPa.

5.5 Maximum inlet pressure

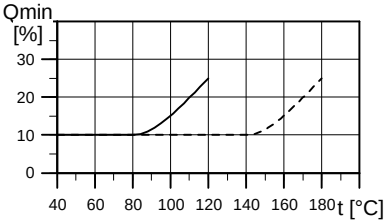
The table on page 16 states the maximum permissible inlet pressure. However, the actual inlet pressure + maximum pump pressure (at no flow) must always be lower than the values stated in fig. A, page 15.

The pumps are pressure-tested at a pressure of 1.5 times the values stated in fig. B, page 16.

5.6 Minimum flow rate

Due to the risk of overheating, do not use the pump at flows below the minimum flow rate.
The curves below show the minimum flow rate as a percentage of the nominal flow rate in relation to the liquid temperature.

- - - - = air-cooled top.



TM01 2816 2302

Fig. 5 Minimum flow rate

Caution ***The pump must not run against a closed discharge valve.***

5.7 Electrical data

See motor nameplate.

5.8 Frequency of starts and stops

Motor size [kW]	Maximum number of starts per hour
≤ 3	200
4-30	100
37-55	75
75	50

5.9 Dimensions and weights

Dimensions: See fig. C, page 17.
Weights: See label on the packing.

5.10 Sound pressure level

See fig. D, page 18.

6. Installation

The pump must be secured to a horizontal, plane and solid foundation by bolts through the holes in the base plate.
When installing the pump, follow the procedure below in order to avoid damaging the pump.

Step	Action
1  TM02 0013 3800	Arrows on the pump base show the direction of flow of liquid through the pump.
2  TM00 2256 3393	This information is stated on page 17: • port-to-port lengths • dimensions of the base • pipework connections • diameter and position of foundation bolts.
3  TM01 1241 4097	The pump can be installed vertically or horizontally (CR, CRN 120 and 150, 75 kW, only vertically). However, the motor must neither fall below the horizontal plane nor be installed upside down. Ensure that an adequate supply of cool air reaches the motor cooling fan. Motors above 4 kW must be supported.
4  TM02 0116 3800	To minimize possible noise from the pump, we advise you to fit expansion joints on either side of the pump. The foundation/installation must be carried out as described in section *6.1*. Fit isolating valves on either side of the pump to avoid draining the syestem if the pump needs to be removed for cleaning, repair or replacement. Always protect the pump against backflow by means of a non-return valve (foot valve).
5  TM02 0114 3800	Install the pipes so that air locks do not occur, especially on the suction side of the pump.
6  TM02 0115 3800	Fit a vacuum valve close to the pump if the installation has one of these characteristics: • The discharge pipe slopes downwards away from the pump. • There is a risk of siphon effect. • Protection against backflow of unclean liquids is needed.

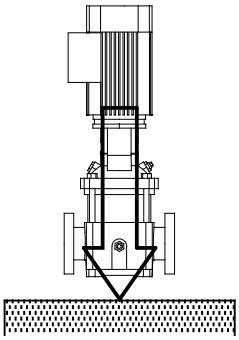
6.1 Foundation

Note

The foundation/installation must be carried out in accordance with the following instructions. Non-compliance may result in functional faults which will damage the pump components.

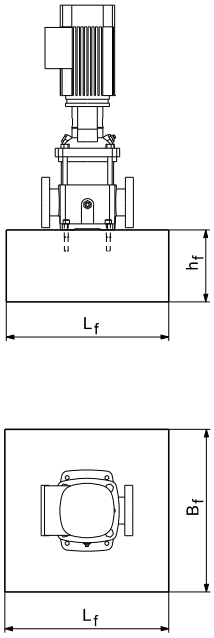
Grundfos recommends to install the pump on a concrete foundation which is heavy enough to provide permanent and rigid support to the entire pump. The foundation must be capable of absorbing any vibration, normal strain or shock. The concrete foundation must have an absolutely level and even surface.

Place the pump on the foundation, and fasten it. The base plate must be supported on the whole area. See fig. 6.



TM04 0342 0608

Fig. 6 Correct installation



TM04 0343 0608

Fig. 7 Foundation

The recommended length and width are shown in fig. 7. Note that the length and width of the foundation for pumps with motor size ≤ 30 kW must be 200 mm larger than the base plate.

For pumps with motor size ≥ 37 kW, the length and width must always be 1.5 x 1.5 (L_f x W_f) metres.

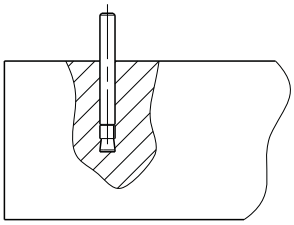
The mass of the foundation must be at least 1.5 times the total mass of the pump. The minimum height of the foundation (h_f) can then be calculated:

$$h_f = \frac{m_{pump} \times 1.5}{L_f \times B_f \times \delta_{concrete}}$$

The density (δ) of concrete is usually taken as 2,200 kg/m^3.

In installations where noise-less operation is particularly important, a foundation with a mass up to 5 times that of the pump is recommended.

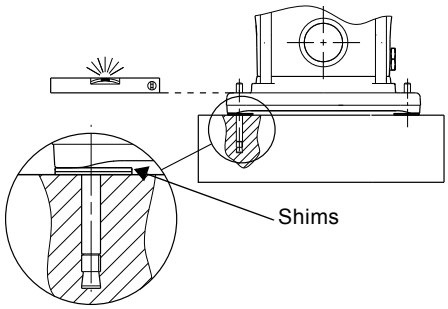
The foundation must be provided with bolts for fixing the base plate. See fig. 8.



TM03 4589 2206

Fig. 8 Bolt in foundation

When the foundation bolts are in position, the pump can be placed on the foundation. The base plate can now be aligned using shims, if necessary, so that it is completely horizontal. See fig. 9.



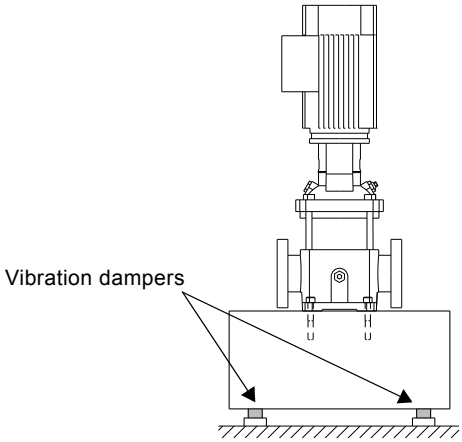
TM04 0362 0608

Fig. 9 Alignment with shims

6.2 Vibration dampening

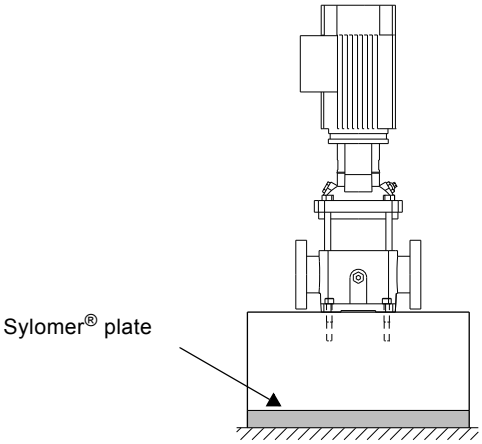
If vibration dampers are used, they must be installed under the foundation. Pumps with motor size ≤ 30 kW can use vibration dampers as shown in fig. 10.

For pumps with motor sizes ≥ 37 kW, use a Sylomer® plate as shown in fig. 11.



TM04 1691 1008

Fig. 10 Pump on vibration dampers



TM04 1692 1008

Fig. 11 Pump on Sylomer® plate

6.3 Outdoor installation

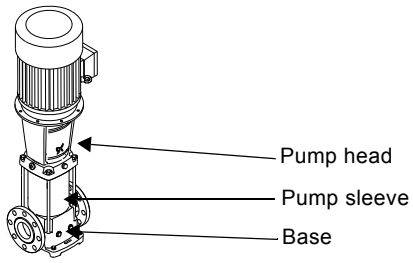
When installed outdoors, it is recommended to provide the motor with a rain cover. We also recommend to open one of the drain holes in the motor flange.

6.4 Hot surfaces

Warning

When pumping hot liquids, care should be taken to ensure that persons cannot accidentally come into contact with hot surfaces.

Figure 12 shows which pump parts get as hot as the pumped liquid.



TM04 0361 0608

Fig. 12 Hot surfaces on a CR, CRI, CRN pump

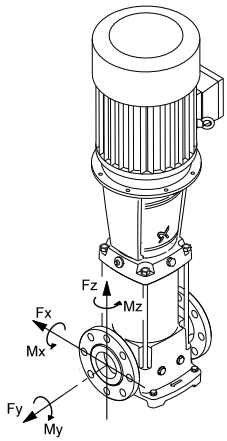
6.5 Torques

The table shows the recommended torques for bolts in base and flanges.

CR, CRI, CRN	Base [Nm]	Flange [Nm]
1s to 5	40	50-60
10 to 20	50	60-70
32 to 150	70	70-80

6.6 Flange forces and torques

If not all loads reach the maximum permissible value stated in the tables below, one of these value may exceed the normal limit. Contact Grundfos for further information.



TM04 0346 0608

Fig. 13 Flange forces and torques

Y-direction: Direction of chamber stack

Z-direction: 90 ° from inlet/outlet

X-direction: Inlet/outlet

Forces

Flange, DN [mm]	CR, CRI, CRN	Force, Y-direction [N]	Force, Z-direction [N]	Force, X-direction [N]
25/32	1s to 5	760	1170	780
40	10	1000	1250	1100
50	15 and 20	1350	1650	1500
65	32	1700	2075	1875
80	45	2050	2500	2250
100	64 and 90	2700	3350	3000
125/150	120 and 150	2700	3350	3000

Torques

Flange, DN [mm]	CR, CRI, CRN	Torque, Y-direction [Nm]	Torque, Z-direction [Nm]	Torque, X-direction [Nm]
25/32	1s to 5	820	970	1220
40	10	900	1050	1300
50	15 and 20	1000	1150	1400
65	32	1075	1225	1500
80	45	1150	1300	1600
100	64 and 90	1250	1450	1750
125/150	120 and 150	1250	1450	1750

7. Electrical connection

The electrical connection should be carried out by an authorised electrician in accordance with local regulations.

Warning

Before removing the terminal box cover and before removing/dismantling the pump, make sure that the power supply has been switched off and that it cannot be accidentally switched on.

The pump must be connected to a main switch.

Caution ***The user is to consider whether it is necessary to install an emergency stop switch.***

The operating voltage and frequency are marked on the motor nameplate. Make sure that the motor is suitable for the power supply on which it will be used and the motor terminal connection is correct. You will find a wiring diagram in the terminal box.

7.1 Cable entry/screwed connection

All motors are supplied without screwed cable entries. The table below shows the numbers and sizes of cable entry holes of the terminal box (standard EN 50262).

Motor [kW]	Number and size of cable entries	Description
0.25 - 0.55	2 x M20 x 1.5	The holes have precast threads and are closed with knock-out cable entries
0.75 - 3.0	2 x M20	The holes are closed with knock-out cable entries
4.0 - 7.5	4 x M25	The holes are closed with knock-out cable entries
11 - 22	2 x M20 4 x M40	The holes are closed with knock-out cable entries
30 - 45	2 x M50 x 1.5	Blanking plug
55 - 75	2 x M63 x 1.5	Blanking plug

7.2 Three-phase connection

	Mains supply [V]		
	Delta connection		Star connection
50 Hz	220-240	/	380-415
	380-415	/	660-690
60 Hz	220-277	/	380-480 1)
	380-480	/	660-690

1) 60 Hz motors, 0.37 - 1.1 kW: 220-277/380-440 V.

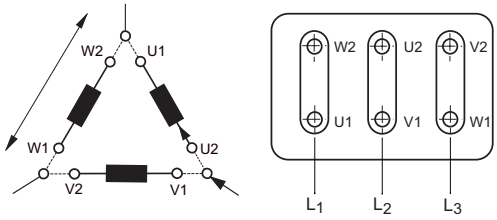


Fig. 14 Delta connection

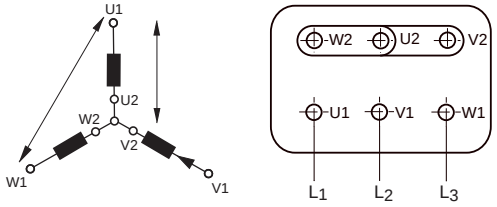

Fig. 15 Star connection

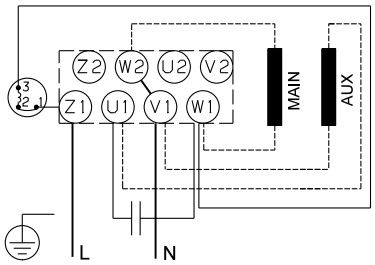
If the motor is provided with PTC sensors or PTO contacts, the connection must be in accordance with the wiring diagram in the terminal box.

Three-phase motors must be connected to a motor-protective circuit breaker.

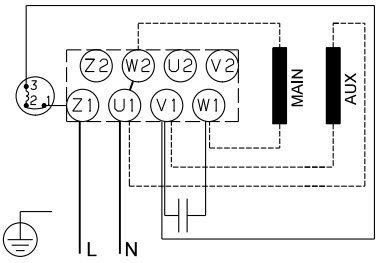
7.3 Single-phase connection

	Mains supply [V]		
	"Low voltage"		"High voltage"
50 Hz	220-230	/	240



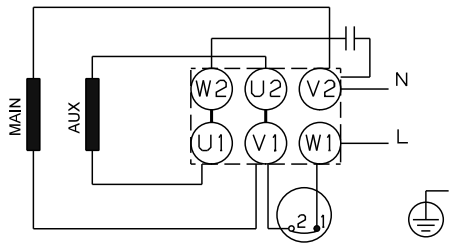
TM04 1693 1008

Fig. 16 Connection, "low voltage", 0.37 - 0.75 kW



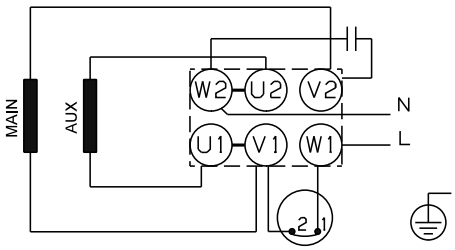
TM04 1694 1008

Fig. 17 Connection, "high voltage", 0.37 - 0.75 kW



TM04 0345 0608

Fig. 18 Connection, "low voltage", 1.1 - 2.2 kW



TM04 0344 0608

Fig. 19 Connection, "high voltage", 1.1 - 2.2 kW

Single-phase Grundfos motors incorporate a thermal switch and require no additional motor protection.

7.4 Terminal box position

The terminal box can be turned to four positions, in 90 ° steps. Follow this procedure:

1. If necessary, remove the coupling guards. Do not remove the coupling.
2. Remove the bolts securing the motor to the pump.
3. Turn the motor to the required position.
4. Replace and tighten the bolts.
5. Replace the coupling guards.

Carry out the electrical connection as shown in the diagram inside the terminal box cover.

7.5 Frequency converter operation

Motors supplied by Grundfos

All three-phase motors supplied by Grundfos can be connected to a frequency converter. The frequency converter must be set to variable torque.

Depending on the frequency converter type, this may cause increased acoustic noise from the motor. Furthermore, it may cause the motor to be exposed to detrimental voltage peaks.

Caution

Grundfos motors, types MG 71 and MG 80, for supply voltages up to and including 440 V without phase insulation (see motor nameplate), must be protected against voltage peaks above 650 V (peak value) between the supply terminals.

We recommend to protect all other motors against voltage peaks higher than 1200 V by 2000 V/µsec.

The above disturbances, i.e. both increased acoustic noise and detrimental voltage peaks, can be eliminated by fitting an LC filter between the frequency converter and the motor.

For further information, please contact the frequency converter or motor supplier.

Other motor makes than those supplied by Grundfos

Please contact Grundfos or the motor manufacturer.

8. Start-up

Caution

Do not start the pump until it has been filled with liquid and vented. If the pump runs dry, the pump bearings and the shaft seal may be damaged.

Warning

Pay attention to the direction of the vent hole and take care to ensure that the escaping water does not cause injury to persons or damage to the motor or other components.
In hot-water installations, pay special attention to the risk of injury caused by scalding hot water.

Follow the instructions on page 28.

CR, CRI, CRN 1s to 5

For these pumps, we advise you to open the bypass valve during start-up, see fig. 20 for bypass valve location. The bypass valve connects the suction and discharge sides of the pump, thus making the filling procedure easier. Close the bypass valve again when the operation is stable.

When pumping liquids containing air, we advise you to leave the bypass valve open if the operating pressure is lower than 6 bar.

Close the bypass valve if the operating pressure constantly exceeds 6 bar. Otherwise the material at the opening will be worn because of the high liquid velocity.

8.1 Shaft seal run-in

The seal faces are lubricated by the pumped liquid, meaning that there may be a certain amount of leakage from the shaft seal.

When the pump is started up for the first time, or when a new shaft seal is installed, a certain run-in period is required before the leakage is reduced to an acceptable level. The time required for this depends on the operating conditions, i.e. every time the operating conditions change, a new run-in period will be started.

Under normal conditions, the leaking liquid will evaporate. As a result, no leakage will be detected.

However, liquids such as kerosene will not evaporate.
The leakage may therefore be seen as a shaft seal failure.

9. Maintenance

Warning

Before starting work on the pump, make sure that all power supplies to the pump have been switched off and that they cannot be accidentally switched on.

Pump bearings and shaft seal are maintenance-free.

Motor bearings

Motors not fitted with grease nipples are maintenance-free.

Motors fitted with grease nipples should be lubricated with a high-temperature, lithium-based grease. See the instructions on the fan cover.

In the case of seasonal operation (motor is idle for more than 6 months of the year), we recommend you to grease the motor when the pump is taken out of operation.

Depending on the ambient temperature, the motor bearings must be replaced or lubricated according to the table below. The table applies to 2-pole motors. The number of operating hours stated for bearing replacement are guidelines only.

Motor size [kW]	Bearing replacement interval [operating hours]				
	40 °C	45 °C	50 °C	55 °C	60 °C
0.37 - 0.75	18000	-	-	-	-
1.1 - 7.5	20000	15500	12500	10000	7500

Motor size [kW]	Lubrication interval [operating hours]				
	40 °C	45 °C	50 °C	55 °C	60 °C
11 - 18.5	4500	3400	2500	1700	1100
22	4000	3100	2300	1500	1000
30 - 55	4000	3000	2000	1500	-
75	2000	1500	1000	500	-

Intervals for 4-pole motors are twice as long as those for 2-pole motors.

If the ambient temperature is lower than 40 °C, bearings must be replaced/lubricated at the intervals mentioned under 40 °C.

10. Frost protection

Pumps which are not being used during periods of frost should be drained to avoid damage.

Drain the pump by loosening the vent screw in the pump head and by removing the drain plug from the base.

Warning

Pay attention to the direction of the vent hole and take care to ensure that the escaping water does not cause injury to persons or damage to the motor or other components.
In hot-water installations, pay special attention to the risk of injury caused by scalding hot water.

Do not tighten the vent screw and replace the drain plug until the pump is to be used again.

CR, CRI, CRN 1s to 5

Before replacing the drain plug in the base, screw the bypass valve out against the stop. See fig. 20.

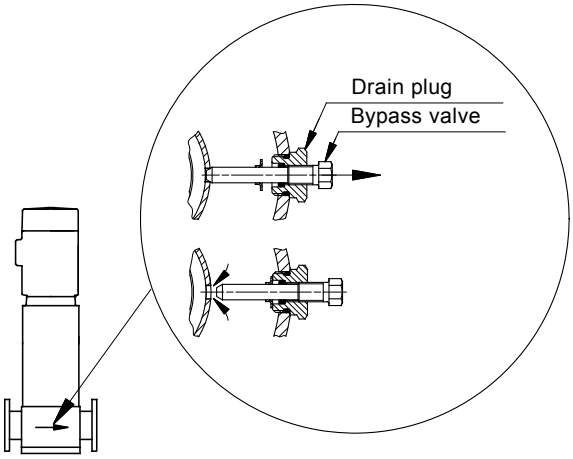


Fig. 20 Location of drain plug and bypass valve

Fit the drain plug by tightening the large union nut followed by the bypass valve.

11. Service

It is advisable to repair pumps with motors of 7.5 kW and up at pump site. Necessary lifting equipment must be available.

Note

If a pump has been used for a liquid which is toxic or injurious to health, the pump will be classified as contaminated.

If Grundfos is requested to service the pump, Grundfos must be contacted with details about the pumped liquid, etc. *before* the pump is returned for service. Otherwise Grundfos can refuse to accept the pump for service.

Possible costs of returning the pump are to be paid by the customer.

However, any application for service (no matter to whom it may be made) must include details about the pumped liquid if the pump has been used for liquids which are toxic or injurious to health.

11.1 Service kits and manuals

Service kits and manuals for CR, CRI and CRN, see www.grundfos.com (WebCAPS), WinCAPS or Service Kit Catalogue.

12. Fault finding

Warning

Before removing the terminal box cover and before removing/dismantling the pump, make sure that the power supply has been switched off and that it cannot be accidentally switched on.

Fault	Cause	Remedy
1. Motor does not run when started.	a) Supply failure.	Connect the power supply.
	b) Fuses are blown.	Replace fuses.
	c) Motor-protective circuit breaker has tripped out.	Reactivate the motor-protective circuit breaker.
	d) Thermal protection has tripped out.	Reactivate the thermal protection.
	e) Main contacts in motor-protective circuit breaker are not making contact or the coil is faulty.	Replace contacts or magnetic coil.
	f) Control circuit is defective.	Repair the control circuit.
	g) Motor is defective.	Replace the motor.
2. Motor-protective circuit breaker trips out immediately when supply is switched on.	a) One fuse/automatic circuit breaker is blown.	Replace the fuse/cut in the circuit breaker.
	b) Contacts in motor-protective circuit breaker are faulty.	Replace motor-protective circuit breaker contacts.
	c) Cable connection is loose or faulty.	Fasten or replace the cable connection.
	d) Motor winding is defective.	Replace the motor.
	e) Pump mechanically blocked.	Remove the mechanical blocking of the pump.
	f) Motor-protective circuit breaker setting is too low.	Set the motor-protective circuit breaker correctly.
3. Motor-protective circuit breaker trips out occasionally.	a) Motor-protective circuit breaker setting is too low.	Set the motor-protective circuit breaker correctly.
	b) Low voltage at peak times.	Check the power supply.
4. Motor-protective circuit breaker has not tripped out but the pump does not run.	a) Check 1 a), b), d), e) and f).	
5. Pump performance not constant.	a) Pump inlet pressure is too low (cavitation).	Check the suction conditions.
	b) Suction pipe/pump partly blocked by impurities.	Clean the suction pipe/pump.
	c) Pump draws in air.	Check the suction conditions.
6. Pump runs but gives no water.	a) Suction pipe/pump blocked by impurities.	Clean the suction pipe/pump.
	b) Foot or non-return valve blocked in closed position.	Repair the foot or non-return valve.
	c) Leakage in suction pipe.	Repair the suction pipe.
	d) Air in suction pipe or pump.	Check the suction conditions.
	e) Motor runs in the wrong direction of rotation.	Change the direction of rotation of the motor.
7. Pump runs backwards when switched off.	a) Leakage in suction pipe.	Repair the suction pipe.
	b) Foot or non-return valve defective.	Repair the foot or non-return valve.
8. Leakage in shaft seal.	a) Shaft seal is defective.	Replace the shaft seal.
9. Noise.	a) Cavitation.	Check the suction conditions.
	b) Pump does not rotate freely (frictional resistance) because of incorrect pump shaft position.	Adjust the pump shaft. Follow the procedure in fig. F, G or H at the end of these instructions.
	c) Frequency converter operation.	See section *7.5 Frequency converter operation*.

13. Disposal

This product or parts of it must be disposed of in an environmentally sound way:

1. Use the public or private waste collection service.
2. If this is not possible, contact the nearest Grundfos company or service workshop.

Subject to alterations.

Pos.	Designation	
	(GB)	(ZH)
1	Adapter flange	接头法兰
1a	Motor stool	电机座
2	Pump head	泵头
3	Chamber, top	腔体，顶部
3a	Chamber without neck ring	无耐磨环的腔体
4	Chamber complete	完整腔体
4a	Chamber with bearing ring	有耐磨环的腔体
5a	Chamber complete	完整腔体
6	Base	基架
6a	Stop pin	止动销
6d	Guide plate for base	基架导板
6g	Bearing ring	轴承环
7	Coupling guard	联轴器护罩
7a	Screw	螺丝
8	Coupling complete	联轴器成品
9	Screw	螺丝
10	Shaft pin	轴销
18	Air vent screw	排气螺丝
19	Pipe plug	管塞
21	Plug	塞
23	Plug	塞
25	Drain plug	放水螺塞
26	Staybolt	定位螺栓
26a	Strap	拉紧板条
26b	Screw	螺丝
26c	Washer	垫圈
28	Screw	螺丝
28a	Screw	螺丝
31	Screw	螺丝
32a	Washer	垫圈
35	Screw	螺丝
36	Nut	螺母
36a	Nut	螺母
37	O-ring/gasket	O型圈/垫圈
38	O-ring	O型圈
38a	O-ring	O型圈
44	Inlet part complete	进口部分
45	Neck ring	颈环
45a	Neck ring complete	颈环成品
47	Bearing ring	轴承环
47a	Bearing with driver	带驱动器的轴承
47b	Bearing ring, rotating	轴承动环
47c	Bush	衬套
47d	Retaining ring	挡圈
47e	Retaining ring	挡圈
48	Split cone nut	花键圆锥螺母
49	Impeller	叶轮
49a	Impeller	叶轮
49b	Split cone	花键圆锥
49c	Wear ring	耐磨环
51	Pump shaft	泵轴
55	Sleeve	外套
56	Base plate	基板
56a	Base plate	基板
56c	Screw	螺丝
56d	Washer	垫圈
57	O-ring	O型圈
58	Seal carrier	密封载体
58a	Screw	螺丝
60	Spring	弹簧
61	Seal driver	密封驱动
62	Stop ring	止动环
64	Spacing pipe	隔管
64a	Spacing pipe	隔管
64c	Clamp, splined	花键夹
64d	Spacing pipe	隔管
65	Neck ring retainer	颈环挡圈
66	Washer	垫圈
66a	Washer	垫圈
66b	Lock washer	锁紧垫圈
67	Nut/screw	螺母/螺丝
69	Spacing pipe	隔管
76	Nameplate set	铭牌套件
100	O-ring	O型圈
105	Shaft seal	轴封
201	Flange	法兰
203	Retaining ring	挡圈

Quickguide

Start-up

1 Close the isolating valve on the discharge side of the pump and open the isolating valve on the suction side.	**2** Remove the priming plug from the pump head and slowly fill the pump with liquid. Replace the priming plug and tighten securely.
3 See the correct direction of rotation of the pump on the motor fan cover.	**4** Start the pump and check the direction of rotation.
5 Vent the pump by means of the vent valve in the pump head. At the same time, open the discharge isolating valve a little.	**6** Continue to vent the pump. At the same time, open the discharge isolating valve a little more.
7 Close the vent valve when a steady stream of liquid runs out of it. Completely open the discharge isolating valve.	**8** For further information, see page 10.

启动

1 关闭水泵排出侧的隔离阀，打开吸入侧的隔离阀。	**2** 从泵头拆去引水塞并缓慢加注水泵。装好引水塞并安全拧紧。
3 在电机风扇盖上察看水泵正确的转动方向。	**4** 启动水泵，检查转动方向。
5 通过位于泵头内的除气阀对泵除气。与此同时，稍稍打开排出侧隔离阀。	**6** 水泵继续除气。与此同时，再稍大些打开排出侧隔离阀。
7 在看到液体持续平稳地从除气阀流出后关闭此阀。 完全打开排出侧隔离阀。	**8** 进一步信息请见第22页。
