

Premium Hose-End Controller

Simplicity Meets Sustainability

Dependability on the clock, so you can be off the clock.

Help your customers automate their hose-end irrigation, drip irrigation system, or soaker hose with a simple-to-set Hose-End Controller from Rain Bird®. Available in Garden Hose Thread (GHT) and British Standard Pipe (BSP), this controller features sophisticated automatic programming flexibility along with an extra rugged design for worry-free outdoor watering all season. That's The Intelligent Use of Water™.

Rugged Construction

Rugged brass female coupler and threaded brass male outlet prevent accidental cross-threading and increase durability.

Convenient and Intuitive to Manage

Simple-to-set, seven-day automatic programming for added flexibility of up to six hours of watering per cycle. Intuitive program dial and large LCD screen displays next scheduled water cycle and time remaining on current cycle.

Proactive and Sustainable

Scheduled watering with up to four start times per day enables water to soak in, even on slopes or with clay soil, and programming by day of week complies with watering restrictions.
