	Submersible borehole pump, suitable for pumping cle	an water. Ca	n be installed vertically or horizontally. All ste
	components are made in stainless steel, EN 1.4301 (/ carries drinking water approval.	AISI 304), tha	t ensures high corrosive resistance. This pu
	The pump is fitted with a 2.2 kW MS4000 motor with s	sand shield n	pechanical shaft seal water-lubricated journ
	bearings and a volume compensating diaphragm. The	e motor is a c	anned type submersible motor offering good
	mechanical stability and high efficiency. Suitable for te	•	•
	The motor is not fitted with a temperature sensor. If te fitted.	emperature m	onitoring is desired, a Pt1000 sensor can be
	The motor is for direct-on-line starting (DOL).		
	Further product details		
	The pump is suitable for applications similar to the following	lowing:	
	- raw-water supply		
	 irrigation groundwater lowering 		
	- pressure boosting		
	- fountain applications.

Qty. Description

The elastomer parts in the pump are made of NBR (Nitrile-Butadiene Rubber) which ensures good wear resistance and long service intervals.

In case the pump is used for pumping water with high content of hydrocarbons or solvents, Grundfos offers FKM rubber parts (Fluorocarbon) which are oil and temperature-resistant up to 90 °C.

The pump is built with octagonal bearings with sand flush channels that minimise wear. As wear of the pump is inevitable, the pump design allows for easy replacement of all internal wear parts (bearings, impeller, wear rings and seal rings) to maintain high performance and a long lifetime.

The suction interconnector is fitted with a strainer to prevent large particles from entering the pump. The suction interconnector is designed to comply with NEMA standards for motor mounting/dimensions.

Motor

The stator is hermetically encapsulated in stainless steel and the windings are embedded in polymer compound. This results in high mechanical stability, optimum cooling and reduces the risk of short circuits in the windings.

The shaft seal is a tungsten carbide/ceramic replaceable mechanical shaft seal. The material combination provides optimum sealing, resistance and long life. Together with the shaft seal housing, the sand shield forms a labyrinth seal, which during normal operating conditions prevents penetration of sand particles into the shaft seal.

The motor can be fitted with a Pt100 or Pt1000 sensor that together with a control unit ensures that the maximum operating temperature conditions are not exceeded.
